

BORE HYDROCILLATOR

HYDRAULIC POWERED SELF RECIPROCATING CYLINDERS

Hydrocillator

2.5" Bore Hydrocillator

Features

1. **Double Acting:** Cylinders have power in both directions. Available single or double rod end
2. **Removable Hydraulic Valve:** Only four bolts removed to repair/ replace
3. **Non-Shock/ Efficient:** Cycling valve senses the piston's position and shifts before the piston strikes the end cap. Prevents unnecessary build up of pressure required by many pumps- greatly reduces hydraulic shock
4. **Versatile:** Valve assembly (30gpm max.) may be used for bores from 1-1/2" thru 5"
